**I switch on the heating...**

**set the temperature...**

**...and arrive home!**

# The Edilkamin apps allow you to manage your pellet heating system wherever you are.

The Edilkamin applications allow for **managing all the basic functions** of a pellet-burning product using a **smartphone or tablet,** either at home or from any location, provided that a data connection system is available.

## Purchase the Wi-Fi module and immediately download your app

**(check the application to be downloaded on the technical sheet of the purchased product)**

### WiFire
An app with dynamic flame that varies according to the operating power, to always have the flame under control.

### appFire
A straightforward and intuitive app to generate comfort tailored to your needs.

## This is what you can do remotely:

- Switch your pellet heating system
  (stove, boiler stove, fireplace, thermo-fireplace, boiler or pellet insert) on and off

- Select between manual or automatic operation (WiFire only)

- Set the operating power

- Set the room temperature (air-based models)
  or radiator temperature (water-based models)

- Know the room temperature

- Programme the daily and weekly heating schedule

- Estimate the level of pellets in the tank
  (if loaded and set correctly) (WiFire only)

Available on the **App Store**

ANDROID APP ON **Google play**
